Restriction to one of the following invention is required under 35 USC 121:

Group I: claims 1-9 drawn to a method of continuously producing infusion bags, classified in class 53, subclass 450.

Group II: claims 10-13 and 16, drawn to an apparatus for the continuous production of infusion bags for tea, classified in class 53, subclass 548.

Group III: claims 14 and 15 drawn to an infusion bag classified in class 426, subclass 77.

The inventions are distinct, each from the other because the bag of Group III can be made by methods other than that recited. For example, the bag does not have to be made continuously but can be made in a batch process or even by hand and could also use two webs. The apparatus as claimed in Group II could be used in methods other than that recited in Group I. For example, the apparatus could be used in a form/fill/seal process to package any contents, edible or inedible, and not just tea.

Because these inventions are distinct for the reasons given above and have acquired a status in the art requiring separate searches as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
